Over **12 years** of experience developing AI systems, including **Generative AI, Clinical AI (cAI), Large Language Models (LLMs), Multimodal AI, Federated Learning (FL), Agentic-AI, and Foundation Models (FMs)** across several modalities, including medical imaging (radiology and digital pathology), genomics, and electronic health records (EHRs). I have experience in writing and coordinating EU project proposals and leading cross-domain AI teams for various EU and UKRI-funded projects. My work includes developing **Domain-Specific Foundation Models (DFMs)** in areas such as **Biology-inspired Foundation Models (BIFMs) for cancer research**, **Physics-informed Foundation Models (PIFMs)** for materials discovery, and **Epidemiology-informed Foundation Models (EIFMs)** for pandemic preparedness and response. More broadly, I am also interested in AI applications for materials science, climate, and pandemic science. Experience in developing impactful AI policies through the involvement in the **ISO/BSI** AI standards work-group, and completed **Oxford AI Ethics, Regulation and Compliance**. I have experienced with complex, multi-stakeholder projects, including **Federated Learning in Cancer Research** in the EU (**TRUMPET(€4M)**, **FLUTE(€6M)**), Oxford's Fetal Echocardiography (**COCHE**), and QUB's AI in Computational Pathology for Cancer Research (**PathLake**), hospitals contexts and worked with patient data standards (**GDPR, HL7**), and relevant research regulations. Translate high-level ideas into clinical applications, resourced work plans, successfully managing >10 funded projects (South Korea, Spain, UK). Leading a cross-domain (healthcare, climate, material). In summary, my current research interests focus on **Trustworthy, Ethical, and Responsible AI in Healthcare**, particularly in **Cancer Research**.
